Combating malnutrition in India through Health Spoken Tutorials, IIT Bombay

With alarming statistics revealing that 36% of children in India are stunted, 32% are underweight, and 21% are wasted, the 10-minute self-learning audio-video Health Spoken Tutorials (HST) in 22 languages address the malnutrition crisis by training health care workers on effective breastfeeding, complementary feeding, maternal and young adolescent nutrition.

Together, let's build a healthier India.

If you're a hospital, government agency or an NGO and would like to implement our programme, write to us at:
